

## 1. AlcoSense Elite

The multi-award winning AlcoSense Elite is our flagship breathalyser. Where accuracy is your primary concern the Elite is your breathalyser of choice.

### Easy to Use

AlcoSense™ Elite has been designed to be as easy as possible to use and designed to fit in the palm of your hand. To activate the breathalyser all you do is slide the AlcoSense™ open. Once open it prepares the sensor and the screen will show a count down from 19 to 0, then it will display Blow. When it says blow, blow through the tube for approximately 5 seconds until it beeps.

### You Can't Get it Wrong!\*\*

AlcoSense Elite uses a revolutionary in built air flow sensor meaning that you can't blow too hard or too softly into the unit. If you blow too hard or too soft you can falsely make other breathalysers read too high or too low respectfully. If you don't blow at the correct pressure the AlcoSense Elite will display Error on the screen and allow you to re-take the test.

## Easy to Understand

The AlcoSense™ unit shows your level of intoxication in either  $\mu\text{g/l}$  (micro-grams per liter of blood) or  $\% \text{BAC}$  (percent of blood alcohol content) and shows your reading in increments of 0.01. It will even alert you when you are near or over the drink drive limit, please see the screen shots below.

## Sleek Design

Pocket sized, it can discretely be kept anywhere. AlcoSense™ measures only 95mm (height) x 34mm (width) x 25mm (depth) when closed. It is powered by 3 x AAA batteries (included in the pack) meaning that you can use it anywhere at any time.

## Auto Clean Feature

The AlcoSense™ unit automatically performs a sensor clean after every time it is used, helping to keep the sensor in top condition and reading at its most accurate. Without cleaning moisture, oxidation and contaminants such as tannin can build up, significantly affecting the quality of readings. With AlcoSense™ Elite's automatic sensor clean after every blow test the unit will continue to perform at its best throughout its lifetime.

For a deeper clean AlcoSense™ Elite also has a feature called ASC (Auto Sensor Clean) which is designed to be used every now and again to give the unit a 'spring clean', again ensuring that the unit reads to the highest levels of accuracy. All you have to do is press a button and your AlcoSense™ Elite unit will do the rest for you.

## Reliable

Using the latest technology and innovations, such as sensor algorithm and automatic sensor maintenance, AlcoSense™ Elite can be used again and again without losing accuracy meaning that it is a secure investment. No matter how much you use your AlcoSense™ Elite it won't let you down.

## Accurate

Every AlcoSense unit is tested for accuracy three times before leaving our factory. As a result our quality control is arguably the best in the industry meaning that you can have 100% faith in our products. AlcoSense Elite has industry leading accuracy of  $\pm 0.2\%$  BAC which is unique in this price range.

## 2. AlcoSense Lite

AlcoSense Lite may be our mid range product but the design certainly doesn't cut any corners. It may not have all of the technology of the Elite but for the occasional user looking for an indication of their level of intoxication the AlcoSense Lite will more than fit the bill.

### Easy to Use

Like it's bigger brother, the AlcoSense Lite has been designed to be as easy as possible to use. To do a breath test all you need to do is turn the unit on, wait for it to count down to zero and then blow until it beeps while holding the Blow key down. Easy!

### Easy to Understand Results

AlcoSense™ Lite shows your level of intoxication in ‰ BAC (percent of blood alcohol content) and shows your reading in increments of 0.1 (If you require a more detailed readout or in mg/l please see the AlcoSense Elite). The AlcoSense Lite even alerts you when you are close to or over the drink drive limit. Please see the screen shots below.

Below the limit it shows your reading in increments of 0.1 ‰ BAC

Between 0.5 and 0.7 ‰ BAC it alerts you that you are dangerously close to the limit

Above the limit (0.8 ‰ BAC) it displays the don't drive symbol and beeps

## Sleek Design

Pocket sized, it can discretely be kept anywhere. AlcoSense™ Lite measures only 105mm (height) x 45mm (width) x 25mm (depth). It is powered by 3 x AAA batteries meaning that you can use it anywhere at any time.

## Easy Cleaning & Maintenance

The AlcoSense Lite has an ASC feature, manually selected by the user, which is a deep clean of the sensor and should be undertaken periodically to remove containment like residual alcohol and oxidation from the sensor. If you intend to use your system regularly we would suggest considering the AlcoSense Elite which automatically self cleans after every blow test.

## Use it Again & Again

Using the latest sensor technology and innovations AlcoSense™ Lite can be used again and again meaning that it is a secure investment. We recommend waiting at least a minute between blow tests to allow any residual alcohol left in the blow chamber to evaporate, ensuring an accurate reading. If you wish to do multiple tests, one straight after the other, we recommend considering the AlcoSense Elite for its sensor clean and purge feature.

## Accurate

Every AlcoSense unit is tested for accuracy three times before leaving our factory. As a result our quality control is arguably the best in the industry meaning that you can have 100% faith in our products. AlcoSense Lite has industry leading accuracy of +/-0.2‰BAC which is unique in this price range. If greater accuracy is required please see the AlcoSense Elite.

## BLISTAR PACK ADAPTOR

## Why Delay?

Part of the responsible enjoyment of alcohol is to understand its effect on the body and to understand when you are safe to drive, AlcoSense™ helps people do exactly that and takes out the potentially fatal guess work the morning after. Don't leave it to chance, order yours today.
